## SUMP SAFE EMERGENCY BACKUP DISCHARGE

Protect Your Basement from  
Flooding — Even in Freezing  
Weather!

When winter hits, a frozen sump pump discharge line can turn your basement into a swimming pool. Sump safe emergency backup discharge is your first line of defense—designed to automatically prevent flooding when the primary discharge line is blocked by ice.

## KEY BENEFITS

### **Flood Prevention:**

Handles high volume when the primary line is fully blocked.

### **Automatic Activation:**

Opens only when needed—no manual monitoring.

### **Adjustable Pressure Settings:**

Pump safe emergency backup discharge ensures optimal protection for your system.

### **Reliable Backup:**

Designed for harsh winter conditions and long-term durability.

## ENGINEERING

### HOW THEY WORK:

- When your primary line starts to freeze, water pressure builds in the system.
- The Sump safe emergency backup discharge senses this and automatically opens your secondary discharge line.
- This ensures continuous water removal when fully blocked and when partially frozen.

**ENGINEERED FOR RELIABILITY — BUILT FOR WINTER!**
