STOP BOWING FOUNDATION WALLS WITH IMBEDDED FIBER REINFORCEMENT

STRONG, SEAMLESS, AND RELIABLE

Bowing foundation walls are common in the Greater Toledo area—but there's a smart solution.

Our Imbedded Fiber Reinforcement strengthens your walls without sacrificing aesthetics.

WHY CHOOSE IMBEDDED FIBER REINFORCEMENT

Virtually Invisible

Unlike steel beams, our vertical strips sit flush with your wall and are easily paintable. Once installed, it's hard to tell any work was done!

Maximum Strength

The strips run the full height of the wall, drilled into the block below the floor joint, and bonded with epoxy to tie each mortar joint together. This significantly boosts tensile and shear strength, making your wall much harder to push inward.

WHY CHOOSE IMBEDDED FIBER REINFORCEMENT

Versatile Application

Ideal for block foundations and sometimes poured walls.

Proven Results

Recommended for walls with deflection under 2 inches—excavation and wall re-alignment may be advised for best results.
